hebie Steering Stabilizer

0695 UNI E, suitable for suspension / rigid fork, for frame Ø 28 - 62mm

Price: 8,08 €

Simply stand wellWhen using a Double Leg Kickstand, the problem is that the Front Wheel hangs in the air when parked and tends to tip over. We have developed the Steering Stabilizer to prevent the Handlebar from tipping over!Simply stand well.Steering Stabilizers effectively make it more difficult for the handlebars to turn over when parked (e.g. on a two-legged bike stand). The bike therefore stands much more securely.Steering Stabilizers also increase general riding comfort through greater stability and improved directional stability (e.g. when riding with baskets or bags)Frame, Light Cable and other attachments are no longer damaged by the Handlebar turning over.
