

GAADI Tube

SV, 47mm

Price: 6,25 €

Never be stuck with a flat tire again! Imagine you're enjoying the beautiful weather on your e-bike at the weekend on a tour or you're commuting to work in the morning and suddenly you get a flat tire. There's (no) joy in that. It's good to be prepared for such situations and have a Spare Tube or Repair Kit with you so that you can continue riding after the repair. Nevertheless: Tools are needed, the Wheel has to be removed and refitted, your hands get dirty and you arrive at your destination late due to the unplanned stop. It's even better if you have a GAADI tube to hand in such situations. Because this differs fundamentally from conventional tubes in one respect. The GAADI Tube has 2 airtight closed ends, which are directly opposite each other when mounted in the Tires. The advantage? There is no need to remove and reinstall a Wheel to change the Tube. The old tube is simply cut after it has been pulled out of the tire and the new GAADI tube is then inserted into the tire, slightly inflated. Put one side of the tire back on the Wheel, inflate and you're done. After a short time you can continue your ride. You have certainly never fixed a flat tire as quickly and effortlessly as with the GAADI Tube.
