

SUPERNOVA Front Light "V6s"

matt black, lateral bracket for 31,8mm clamp by the stem

RRP: 149,00 €

Illuminates your pathDespite its high light output of 165 lumens, the SUPERNOVA "V6s" E-Bike Front Light is very efficient and gentle on the E-Bike Battery, which powers the headlight. The heat from the LED is conducted directly to the cooling fins, which extends the service life of the entire E-Bike Front Light. The Front Light is conveniently operated via the e-bike's control unit. Thanks to the bright Terraflux 2 lens, you are clearly visible in traffic and do not dazzle oncoming traffic, as the Terraflux technology directs the light exactly where it is needed on the road in front of the bike with wide illumination. In addition to the wide light cone, the daytime running light ensures that you are seen.The "V6s" from SUPERNOVA is suitable for e-bikes up to 25 km/h and naturally comes with a German test mark.
