

CONTEC Crank remover "TFM-130"

with 14/15mm socket and 15mm spanner

Price: 7,50 €

Square taper cranks are the standard on many bicycles. If you want to carry out repairs yourself as a hobby mechanic, you need the right tool. Before square taper crankarms can be removed from the bottom bracket axle, the crank bolt must first be loosened. With the CONTEC crank puller, recessed bolts can be easily loosened thanks to the 14/15 mm socket and 15 mm open-ended spanner. The rubber grip of the tool ensures good grip and also enables the crank bolt to be tightened powerfully without slipping. The CONTEC crank puller facilitates drivetrain and bottom bracket repairs on classic square taper cranksets.
