

CONTEC Handlebar "Moab"

Ø 25,4mm, grip width: 660mm, rise 25mm, backsweep 8°

RRP 29,95 €

CONTEC handlebar The Moab is a handlebar with a width of 660mm. CONTEC manufactures it from lightweight aluminum. The handlebar has a clamping diameter of 24,5mm. The backsweep of 8° allows you to grip the handlebar more ergonomically than one without this bend. The backsweep describes the handlebar bend in the direction of the saddle and should avoid the overstretching of the hands and the upper body. The more backsweep, the more relaxed the seating position. And likewise the other way around. To counteract feelings of rollover on steep descents, the handlebar has a rise of 25mm.
